

## PRODUCT INFORMATION

### DermaPure® Decellularized Dermal Allograft

**DermaPure® Decellularized Dermal Allograft** is a specially engineered acellular matrix to stimulate the body, not just the wound for healing, changing the course for complex and chronic wounds.

Through proprietary **dCELL® Technology**, DermaPure is minimally manipulated, 99% DNA-free human-derived dermal tissue that provides intact vascular-like channels and retains the tissue's native growth factors, collagen and elastin.

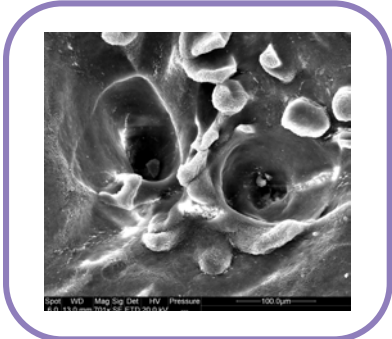

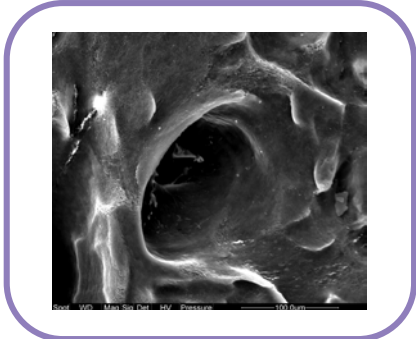

The intact channels of DermaPure present prior application help stimulate revascularization and allows for the natural proliferation of native cells, including endothelial cells and fibroblasts.

DermaPure provides a strong foundation for angiogenesis and triggers healing and replaces the damaged cellular structures. The patient's own living cells flourish to the wound and signals a natural biologic response to stimulate the body, not just the wound, to progress through the phases of wound healing naturally from the start.

Product Code	Size	UOM	HCPCS
010200HD	1 cm x 2 cm	1	Q4152
020200HD	2 cm x 2 cm	1	Q4152
020300HD	2 cm x 3 cm	1	Q4152
030400HD	3 cm x 4 cm	1	Q4152
040600HD	4 cm x 6 cm	1	Q4152

### DermaPure® redirects Vascular Behavior to Trigger Healing

The intact vascular-like channels of DermaPure present prior to application.
